TIMOTHY SNOW
10 Edinburgh Ave, Corner Brook, NL
(709) 650-1500 | skyesnow96@gmail.com

PROFESSIONAL SUMMARY

Motivated IT professional with extensive hands-on experience architecting, deploying, and managing a comprehensive Linux-based infrastructure laboratory. Proficient in system administration, containerization, secure remote networking, and high-availability automation. Adept at translating complex technical requirements into stable, self-healing, and easily monitored systems.

TECHNICAL SKILLS

* Operating Systems: Ubuntu Server (Headless), Parrot OS, Linux (Debian)
* Containerization/Web: Docker, Docker Compose, Nginx Proxy Manager
* Networking & Security: Tailscale, AdGuard Home, NetAlertX, ONVIF, WebRTC
* Monitoring & Auto: Home Assistant, Uptime Kuma, Speedtest Tracker, go2rtc
* Scripting & SysAdmin: Bash scripting, Terminal CLI (Nano), fstab, permissions, systemd, softdog watchdog daemon

HANDS-ON PROJECTS & INFRASTRUCTURE EXPERIENCE

Home Datacenter & Container Orchestration

* Architected and administered a headless Ubuntu server environment using terminal-based tools for all configuration and management.
* Deployed and managed a suite of containerized network services using Docker and Docker Compose, ensuring isolated and reproducible environments.
* Implemented Nginx Proxy Manager for reverse proxy routing and SSL management across internal services.

System Reliability & Storage Management

* Expanded and configured multi-drive storage arrays (SSD and HDD), independently managing formatting, mounting permissions, and file system structures.
* Engineered high-availability solutions by implementing an automated softdog watchdog daemon alongside custom Bash scripts to ensure system uptime and execute auto-recovery reboots during extended remote absences.

Secure Networking & Network Monitoring

* Configured Tailscale to establish a secure, zero-trust virtual private network for encrypted remote server administration and service access.
* Deployed AdGuard Home for network-wide DNS filtering and traffic control.
* Implemented comprehensive network monitoring using Speedtest Tracker and NetAlertX to track bandwidth performance, uptime, and connected hosts.

Smart Infrastructure & Video Integration

* Built and customized Home Assistant dashboards for centralized smart home management and automation.
* Integrated IP surveillance equipment (TP-Link Tapo C200) utilizing ONVIF protocols and go2rtc to establish low-latency WebRTC video feeds.

Security & Development Workstation

* Maintained a dual-boot workstation environment utilizing Parrot OS to facilitate advanced system administration, network testing, and software development workflows.
