POTENTIAL HAZARDS

Ground Disturbances / Evacuation Hazards:
Explain:

Ergonomic Hazards:
Explain:

Miscellaneous Hazards:

- ☐ Other personnel/equipment in work area
- ☐ Open holes/excavations
- ☐ Conflicting work (other trades, subcontractors)
- ☐ Working at heights
- ☐ Overhead power lines
- ☐ Overhead hazards (falling debris, tools)
- ☐ Uncontrolled energy (lock-out tag-on, isolation)
- ☐ Arc flash
- ☐ Hot work (combustibles, ignition sources)
- ☐ Unguarded equipment
- ☐ Explosive handling/transportation/storage
- ☐ Stuck equipment/recovery of equipment

SAFETY
IS A TEAM EFFORT

HY-TECH DRILLING

FO-100

SAFETY – JOB HAZARD ANALYSIS TOOL (JHA)

Name: _____

Date: _____

Time: _____

Location: _____

JHA SUPERVISOR FIELD CHECK

Important: If 'No' is checked off below, the issue noted must be resolved prior to work commencing.

- Have all workers received adequate instruction and understand this task?
  Yes☐ No☐
- Does the crew have all the tools/training/equipment required to do the job safely?
  Yes☐ No☐
- Are workers complying to controls developed from JHA (FO-100)?
  Yes☐ No☐

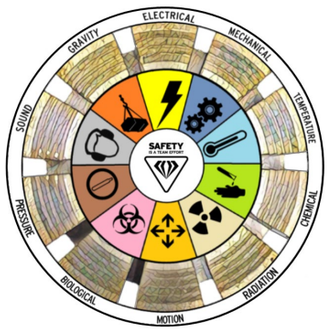

Signature: _____

Submit this form to
safety@hy-techdrilling.com
when completed

HAZARD ID

Think about the task you are about to do and identify what energies are present:

1. What could go wrong?
2. Could you or someone else get hurt?
3. What can YOU do to prevent it?
4. If the task is complex or there are many hazards to control, write a JHA.

MINOR	Minor injury or discomfort, First Aid, spill less than 1L, external reputation not affected.
MODERATE	Medical Aid, Lost Time injury, recoverable spill over 1L, minor fire, temporary drilling shutdown, external reputation damaged and takes some time and effort to repair.
MAJOR	Fatality, multiple injuries, illness requiring hospitalization, permanent impairment, non-recoverable spill over 1L, explosion, loss of contract, loss of $250K+, external reputation irrevocably or severely damaged.

UNLIKELY	Given current practices and procedures, this incident is not likely to occur at this or another worksite.
OCCASIONAL	Incident has occurred at a similar worksite and may reasonably occur at this or another worksite.
LIKELY	Incident has occurred at this worksite or is reasonably likely to occur at any time at this or another worksite.

RISK MATRIX			SEVERITY		
			MINOR	MODERATE	MAJOR
			1	2	3
PROBABILITY	UNLIKELY	1	2	3	4
	OCCASIONAL	2	3	4	5
	LIKELY	3	4	5	6

SOUND
Sound is produced when a force causes an object or substance to vibrate and the energy is transferred though the substance in waves (i.e. equipment noise, impact noise, vibration, high-pressure release, and the impact of noise on verbal communication).

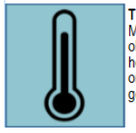

GRAVITY
The force caused by the attraction of all other masses to the mass of the earth (i.e. object, collapsing roof, and a body tripping or falling).

ELECTRICAL
The presence and flow of an electric charge (i.e. power lines, transformers, static charges, lightning, energized equipment, wiring, and batteries).

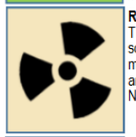

MECHANICAL
The energy of the components of a mechanical system, i.e. rotation, vibration, or motion within an otherwise stationary piece of equipment or machinery (i.e. rotating equipment, compressed springs, drive belts, conveyors, and motors).

TEMPERATURE
Measurement of differences in thermal energy of objects or environment, which we sense as either heat or cold (i.e. open flame, ignition sources, hot or cold surfaces, liquids, gases; steam; friction; general environmental and weather conditions).

CHEMICAL
Energy present in chemicals that inherently or by reaction, has a potential to create physical or health hazards to people, equipment, environment (i.e. flammable vapors, reactive hazards, corrosives, carcinogens or other toxic compounds, phosphorics, combustibles, oxygen-deficient atmospheres, welding fumes, dusts).

RADIATION
The energy emitted from radioactive elements or sources and naturally occurring radioactive materials (NORM) (i.e. lighting issues, welding arcs, solar rays, microwaves, lasers, X-rays, and NORM scale).

MOTION
The change in position of objects or substances. (i.e. vehicle, vessel, or equipment movement; flowing water; wind; and body positioning when lifting, straining, or bending).

BIOLOGICAL
Living organisms that can present a hazard. Includes cuts, puncture wounds (i.e. bacteria, viruses, blood-borne pathogens, animals, insects, improperly handled food, contaminated water.

PRESSURE
Energy applied by a liquid or gas that has been compressed or is under a vacuum (i.e. pressure piping, compressed cylinders, control lines, tanks, vessels, hoses, and pneumatic and hydraulic equipment.
